Susie -- EPA has reviewed the Revised Subsurface Data Report. In general, the EWG did a good job of addressing EPAs concerns. As we discussed earlier, the following issues remain with the data report,

Comment-Specific Issues:

Comment 2) Revised text is ambiguous with respect to "that area". Please clarify that GPS signal strength was insufficient near/beneath the bridges.

Comment 5) Please add text to describe the actual 'Method B' process applied to sediment cores. The EWG may also elect to reference Section 2.5 and/or the 'Method B' process described in the QAPP, but must state clearly in this section that the process was modified.

Comment 11b) Please include in the data report a paraphrased version from the response explanation for min/max and NA.

As a recommendation, but not a condition for approval of the data report, a QA check should be performed on Appendix A in order to assume information and data tables in the body of the data report are consistent.

If the EWG agrees to resolve the remaining issues, EPA can approve the data report.

Should you have any questions, please give me a call.

Ravi,

Welcome back! Here is a response to comments and revised subsurface data report. The comments have been addressed in redline. Please let me know if you have any comments or concerns. The figures will be provided in two following e-mails due to file sizes.

Thanks.

Susie
